

B^{III} Solutions

Business: Improvement, Integration, Intelligence

ON TIME.
ON BUDGET.
SOFTWARE SOLUTIONS.

IMPROVEMENT, INTEGRATION, INTELLIGENCE.

B-Three Solutions is a Pittsburgh-based software development company that provides business improvement, business integration, and business intelligence through software. We boast a growing team of over 30 IT professionals, and a portfolio of expertise in a variety of industries.

In business for over a decade, and with more than 100 clients on our roster, B-Three has developed and managed software for nearly every possible business sector.

We assist our clients in aligning their business goals, processes and technology by providing a proven solution, along with a fixed budget and timeline. When the project is complete, the software we produce is guaranteed against all defects with a one-year warranty. Our emphasis and dedication to fixed-fee and fixed-timeline projects is what sets us above and apart from other competing software firms.

In addition, our talented and diverse network of B-Three employees specialize in areas of software coding and development, web design, graphic design, marketing, technical writing, Q/A testing, and database management. As such, we are able to assemble an in-house project team unique to the needs of each individual client.

PROVEN TECHNOLOGIES

AN AGILE APPROACH FOR COST AND TIME SAVINGS.

At B-Three, we recognize that software development is a living process. It's impossible for a client to anticipate all of the unforeseen circumstances that might warrant a change in the original plan. In order to allow for flexibility in the development cycle, while maintaining the original project timeline and budget, all software produced by B-Three Solutions is developed using an Agile methodology.

Agile development starts by holding an initial meeting with the client to evaluate the main project goals. Those goals are broken down into project development periods known as "sprints." Sprints include daily "scrum" sessions where the project development team reviews progress, in addition to retrospective meetings at the conclusion of each sprint to evaluate overall product functionality. Clients are incorporated in all review sessions - giving them day-to-day visibility over the progression of their software product.

This approach allows the client to request changes or adjustments early and often in the development process versus waiting until the process is complete, thus saving valuable time and money, and guaranteeing higher client satisfaction.
